Instantly Create Projects from Requests

Published on 02/06/2017

Job Launch Managers can instantly create a project from their own job launch submission if they are assigned the applicable job launch form as both a submitter and manager. Even administrators must be assigned the relevant forms in order for this feature to work.

Follow the steps below to enable this feature account wide.

1. Navigate to **Account > Account Settings > Customize > Project Options.**
2. Check the box, **'Allow Project Creation from Job Launch Submission.'**
3. Click **'Save.'**

After enabled, the job launch submitter/manager will be able to instantly approve their own requests by clicking the **'Create Project'** button at the bottom right corner of the form.
