Why do I see duplicated fields on a job launch request?

Published on 04/03/2018

If you see duplicated text in certain fields after saving changes on a new request, or viewing a submitted job launch request, this issue was caused by a third-party browser extension, **Grammarly**. You will see the duplicated text when the request submitter has **Grammarly** enabled in their browser.

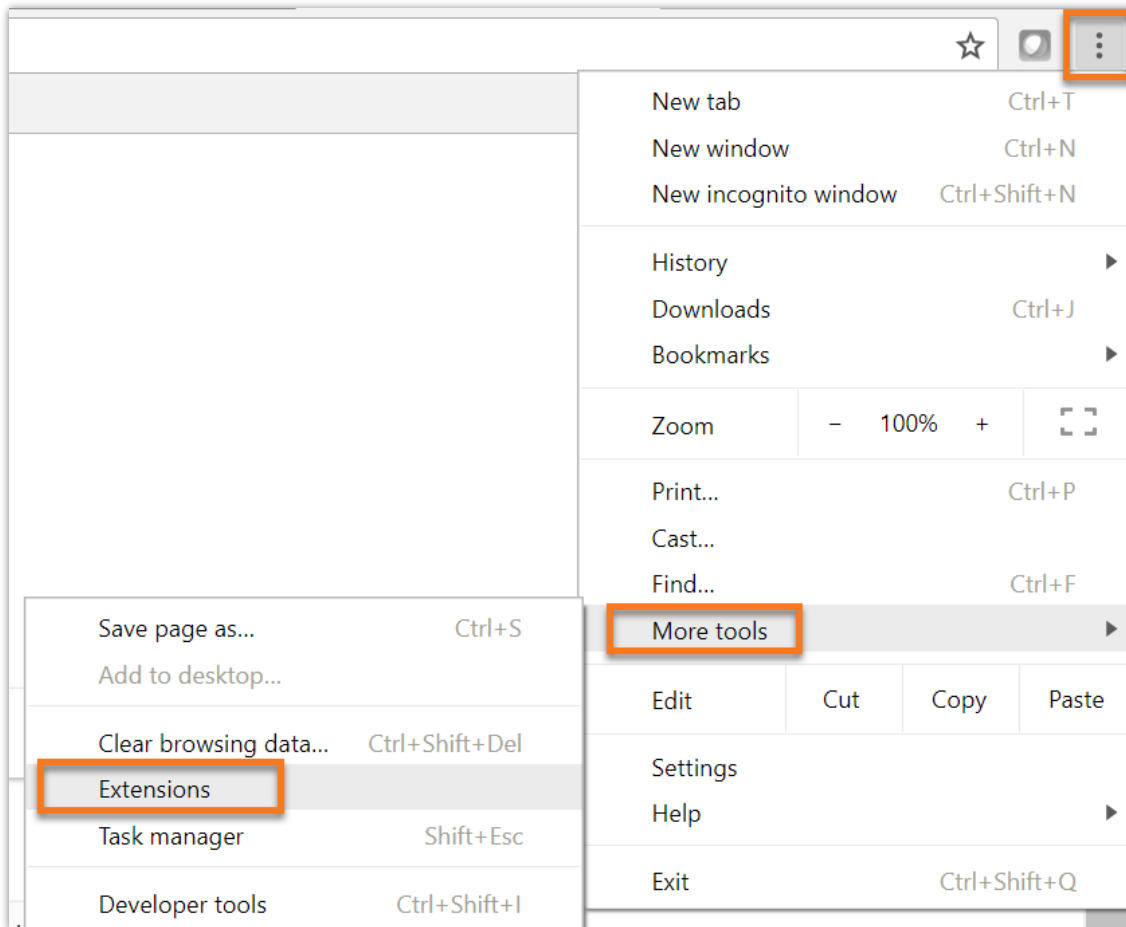

To avoid this issue, the requester will need to disable**Grammarly** *before* filling out their request form.

Disabling the Extension

To temporarily disable the **Grammarly** browser extension, click on options in the top right corner of the browser toolbar. Select **More Tools > Extensions.**

Click the toggle to disable **Grammarly** and submit the request as normal.
