Reviewing a Web Capture

Published on 03/29/2017

Web Capture Rendering

When the proof uploader captures a URL for review, inMotion creates an image of the website for Review +Approval. Based on the proof uploader's selection, you may see a desktop, tablet or mobile capture of the website. In the review environment, the web capture will perform similarly to a static image, i.e. hyperlinks will not be live nor text tools available for annotation.

Viewing the live URL

If enabled by the proof uploader, the asset name may contain the hyperlink of the Web Capture you've been asked to review. Selecting the asset name will open the website in a new tab of your browser.
